WINDOWS 開啟【行動熱點】步驟
Use your Windows device as a mobile hotspot

行動熱點：使用 WINDOWS 系統分享網路給無線裝置使用

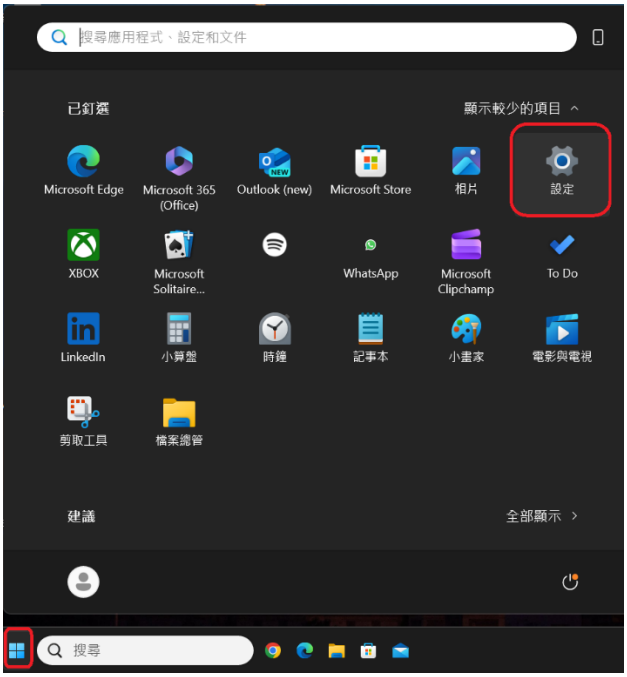
Hotspot: Windows device into a mobile hotspot by sharing your internet connection with other devices over Wi-Fi.

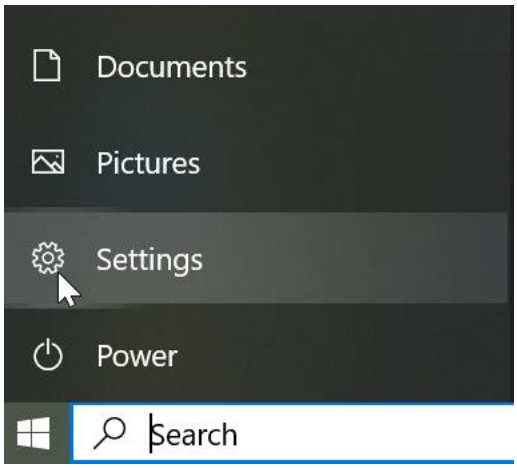
您的電腦必須要有【有線網路卡】與【無線網路卡】並正常使用

Your computer must have both a 【wired network card】 and a 【wireless network card】, and both must be in proper working order.

1. 開啟【設定】

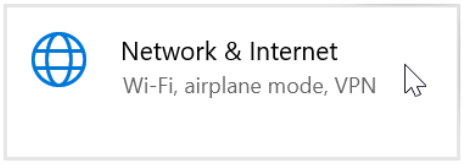
Click **Settings** on your Windows device

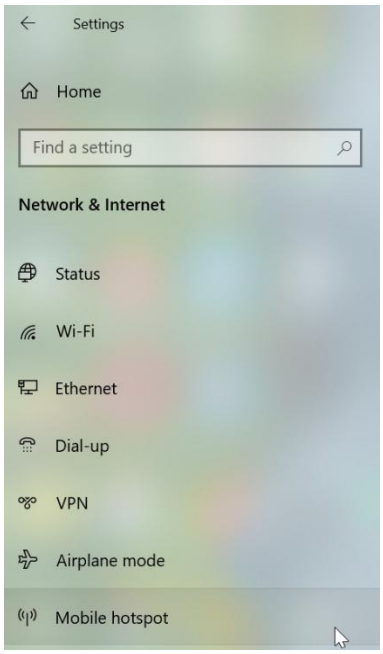




2. 開啟【網路和網際網路】分頁的【行動熱點】

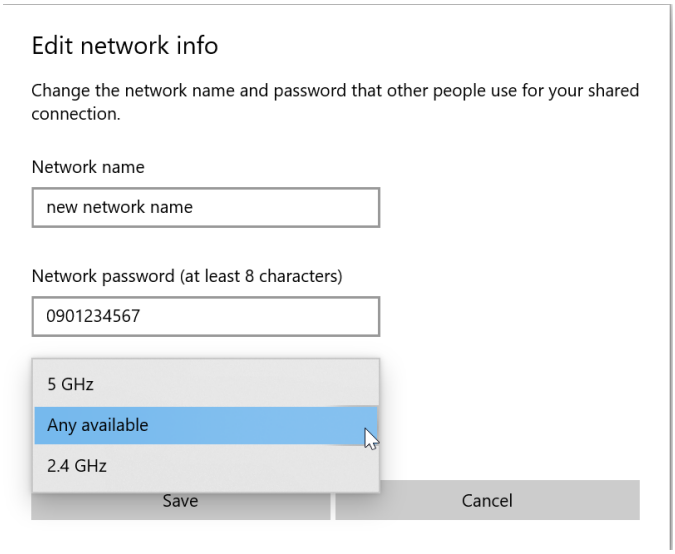
select 【Network & internet】 > 【Mobile hotspot】



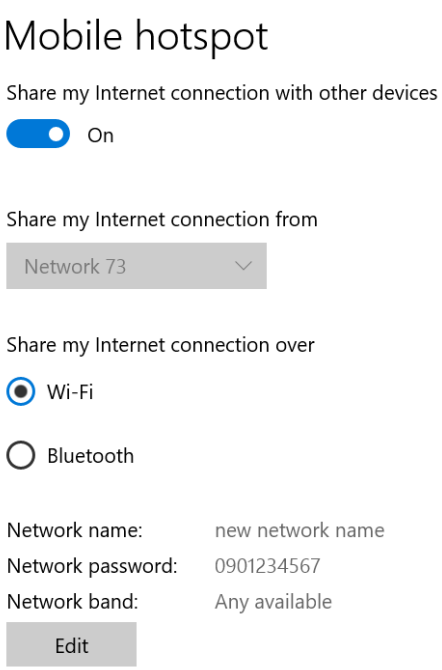


3. 確認來源為要共享的網路，本範例【乙太網路 3】為註冊連線的有線網路。
編輯您的無線網路名稱與密碼 按下內容的【編輯】
Under Share my internet connection from, choose the internet connection you want to share.
Expand the 【Properties】 section, then select 【Edit】

4. 指定網路名稱與連線密碼後按下【儲存】，本範例 SSID 為:無線網路名稱 SSID
網路頻帶：指您的無線網路卡可以分享的網路頻段（硬體限制）
enter a new network name, password, and network band. Select Save.
Network band: refers to the wireless network frequency bands that your wireless network card can share (hardware limitation).



5. 開啟行動熱點
Turn on the Mobile hotspot toggle at the top of the page.



6. 手機掃描下方的行二維碼，按下加入「無線網路名稱 SSID」網路，即可連線。
部分 WINDOWS 版本不提供二維碼，請在手機自行搜尋及輸入。
Scan the QR code below with your mobile phone, press "Add new network name" to connect.
Some Windows versions do not provide QR codes; please search for and enter them on your mobile phone.
